SUMMARY

Software engineer with **4 years of experience** at Goldman Sachs building fintech systems — spanning payment orchestration, vendor integrations, cloud-native services, onboarding platforms and applied AI. Experienced working across technical and business stakeholders to ship in complex, regulated environments. Building applied AI depth across LLM tooling, agentic pipelines, MCP, and RAG.

EXPERIENCE

Goldman Sachs – Private Wealth Management | Associate, Engineering *Jul 2022 – Present*

- Developed an end-to-end digital onboarding platform for Family Offices business, reducing client onboarding time from **4 weeks to 5 mins**. Worked directly with advisors, design, compliance, and operations stakeholders to translate requirements into scalable workflows — with **600+ UHNW clients (~$20B AUM)** onboarded so far.
- Led vendor integration for Bill Pay across invoice approval workflows, **ACH/Wires payment orchestration** (pre- and post-transaction pipeline including NACHA feed file generation, validation, and automated reconciliation), and real-time vendor notifications via REST APIs, webhooks, Kafka, and NRT pipelines.
- Integrated B2B SaaS vendors via REST APIs and SSO (SAML/OIDC) for secure document exchange and partner platform access.
- Built a **cloud-native** notification aggregator service for web and mobile client notifications, deployed end-to-end on AWS (Fargate, EC2, DocumentDB).
- Built an **agent-orchestrated data pipeline** to backfill historical client onboarding records — sequentially executing Python scripts for data cleanup, account validation, and document verification into MongoDB, collaborating across operations, business, and product teams to ensure data fidelity.
- Built an **LLM-powered analytics tool** using the Claude API that lets business users query operational databases in natural language, eliminating SQL dependency for non-technical teams.

Goldman Sachs | Analyst *Jul 2021 – Jul 2022*

- Built features for the Digital Assistant platform used by **100k+ internal users**, reducing vendor reliance and delivering **~$8M in annual cost savings**.
- Built analytics dashboards that reduced support queries by 85% and troubleshooting time by 30%.

OnePlus | Product Strategy Associate *Oct 2021 – Jun 2022*

- Selected among 25 from 25,000+ applicants; ideated for the launch of the OnePlus Boulevard flagship store and led influencer partnership strategy with 170+ creators, scaling brand impressions from **2.1M to 20.9M +**.

EDUCATION

Birla Institute of Technology, Mesra — B.Tech, Electrical & Electronics Engineering (Minor: Computer Science) | GPA: 8.75/10

SKILLS

Languages & Frameworks: Python, Java, TypeScript, JavaScript, React, HTML/CSS, Spring Boot

Infrastructure & Data: REST APIs, Webhooks, SQL, NoSQL (MongoDB / DocumentDB), Kafka, AWS (Fargate, EC2)

AI / LLM: Claude API, OpenAI APIs, LangChain, LangGraph, RAG / Vector Databases, MCP Servers, Prompt Engineering, Agent Development

AWARDS & LEADERSHIP

Goldman Sachs Hackathon Winner | GS Tech Whitepaper Runner-Up | Kotak REIGN Hackathon Winner | Grace Hopper Scholar (AnitaB.org) | Women in Engineering Committee – Goldman Sachs

ADDITIONAL EXPERIENCE

Samsung R&D Institute India — Research Intern: 5G network optimization using deep learning.

Devfolio — Ethereum Women Fellow: Built decentralized applications on Ethereum, exploring DAO governance mechanisms and DeFi protocols including liquidity pools and token contracts.
